

NIH...Turning Discovery Into Health®

Do you have Crohn's Disease?

Crohn's disease is a chronic bowel illness that is a lifelong condition characterized by relapsing inflammation. Although there is no cure for Crohn's disease, researchers at the National Institutes of Health (NIH) are investigating if Vorinostat is safe for people with Crohn's Disease. Participants will receive maintenance therapy with Stelara® after successful treatment with Vorinostat.

To qualify, you:

- Are 18-65 years or older
- Have Crohn's disease
- Are willing to participate in a study that may last more than a year.
- Willing to take Vorinostat

What is involved?

- The study has four parts- screening, treatment, maintenance and post-evaluation.
- You will take the study medication, Vorinostat, as a pill twice a day for up to 12 weeks.
- After successful treatment with Vorinostat you will be invited to take Stelara® for 2 years
- You will have frequent study visits for evaluations and testing.
- Clinical information will be shared with you and your doctor.
- Medication, tests, and procedures conducted at the NIH Clinical Center are at no cost to you.

The NIH Clinical Center is America's Research Hospital is located in Bethesda, Maryland, on the Metro red line (Medical Center stop).
