

# TREATMENT RESEARCH STUDY

## available to those with NON-ALCOHOLIC FATTY LIVER DISEASE

Are you looking for a treatment for non-alcoholic fatty liver disease (NAFLD) or non-alcoholic steatohepatitis (NASH)? Researchers at the National Institutes of Health (NIH) seek volunteers to participate in a research study. For 30 weeks, participants will receive a medication called semaglutide (typically used for Type 2 Diabetes), aiming to improve their liver disease and help them lose weight. The study hopes to better understand liver damage and its treatment in people with these conditions.

### Join our Study:

- You must be at least 18-year-old
- You must be diagnosed or suspected to have non-alcoholic fatty liver disease or nonalcoholic steatohepatitis
- You must not be pregnant or breastfeeding

### Participation Details:

- You will have a screening visit. Our team will collect your medical history, provide a physical exam, request blood work and an abdominal ultrasound. If you are eligible to continue, you will be scheduled for additional visits and admissions.
- All participants will receive medications and medical procedures at no cost and compensation will be provided.
